## **A Personal Note from the Author – Why buy this book and not another one?**

As the CEO of a PPC advertising and Internet marketing agency, I'm often asked by clients not only about

ads and marketing, but also about anonymous surfing, how to hide my IP address, how to delete search history and many other questions concerning Internet privacy and security. And, based on my professional experience and what I learned at one of the best technical universities in the world, I'm always happy to give them solid advice.

Some time ago, I started looking for a good e-book about private browsing that I could recommend to my customers. I searched one of the largest Internet shopping sites and read all the books I could find. The first book was very long, full of badly formatted text copied from the Internet, and contained lots of useless filler. The price was \$10, but even for free, I would never advise anyone to read it. The second book was very high quality, but it was full of technical terms and obscure details that no ordinary human needs to know. The other books I read were no better, and I understood that none of these books would be helpful for my customers. My clients want essential information about Web anonymity and safety, and they don't have endless hours to learn it. I felt that there needed to be an e-book that balances high quality and comprehensiveness with simplicity and quick mastery. That's how this book was born.

I wrote this book to help you be "dressed" and protected on the Web. I hope you'll read it, and also help me improve it by sending your feedback. I'd be exceedingly grateful. Thank you!
