The Practical Astronomer: Explore the Skies Through the Eyes of the Astronomers and Discover for Yourself the Secrets of the Universe Colin A. Ronan

Using a simple telescope or binoculars, make the same observations that Galileo did when he first saw Jupiter and four of its moons, a discovery which challenged the orthodox views of his day. Learn how to catalog the stars according to their brightness, as did the Greek astronomer Hipparchus. Understand how Einstein's Theory of Relativity provides possible answers to the mystery of the beginning and end of the universe. In this book Colin A. Ronan reveals the excitement of observing the phenomena of the universe for yourself. Beginning with the sun, the book describes the nature of the stars and planets forming our Solar System and the other stellar systems beyond. The terms and techniques of astronomers are carefully explained and numerous illustrated experiments, using simple equipment combined with practical advice, show you how to make your own observations with the basic tools of the astronomer. Over 600 spectacular illustrations.
