One natural outcome of the educational reform movement of the 1840s was the growth of the American public library. Though the first public libraries were housed in post offices and town halls, even in local drug stores, growing book collections soon forced cities and towns to recognize the need for larger, more appropriate buildings. Some 450 public libraries were built in the latter half of the nineteenth century. The most important and influential architect of the era who built libraries was Henry Hobson Richardson (1838-1886), perhaps best known for his design of Boston's Trinity Church.

The primary focus of Kenneth Breisch's *Henry Hobson Richardson and the Small Public Library in America* is on Richardson's designs for public libraries in Woburn, North Easton, Quincy, and Malden, Massachusetts, as well as an unbuilt proposal for the Hoyt Library in East Saginaw, Michigan. In addition to placing them within the broader history of American library design, Breisch offers a close examination of these buildings as participants in the cultural, political, and economic developments of the period. Since more than 80 percent of the public libraries built in the latter half of the nineteenth century were privately endowed—as were all of Richardson's library commissions—his discussion of the role of philanthropy, in particular, illuminates the perceived meaning and function of public libraries to the monied classes, as well as their function as memorials to deceased family members.

Breisch also examines the role played by the library profession in the development of modern library planning theory during this period, a role that often clashed with the goals of the architects commissioned to design the library buildings. Although this conflict eventually led the American Library Association to condemn Richardson's buildings as unsuitable for library work, his designs still had enormous influence on the architectural vocabulary of the institution. The fact remains that Richardson invented and refined a significant prototype for the smaller American public library building.
